Providing manufacturing solutions for continually advancing technologies

Planning for Growth

During 2013 Adcotech introduced the Tricorn production system in order to simplify and automate the quote to invoice procedure. The system allows for total traceability and sharing of data whilst reducing all the non-value added tasks.

In line with this investment Adcotech also purchased a capacity planning tool that aligns with the Tricorn system. After a slight delay while we ensured all the data in our system was accurate, 'Scheduler' has 'GONE LIVE'.

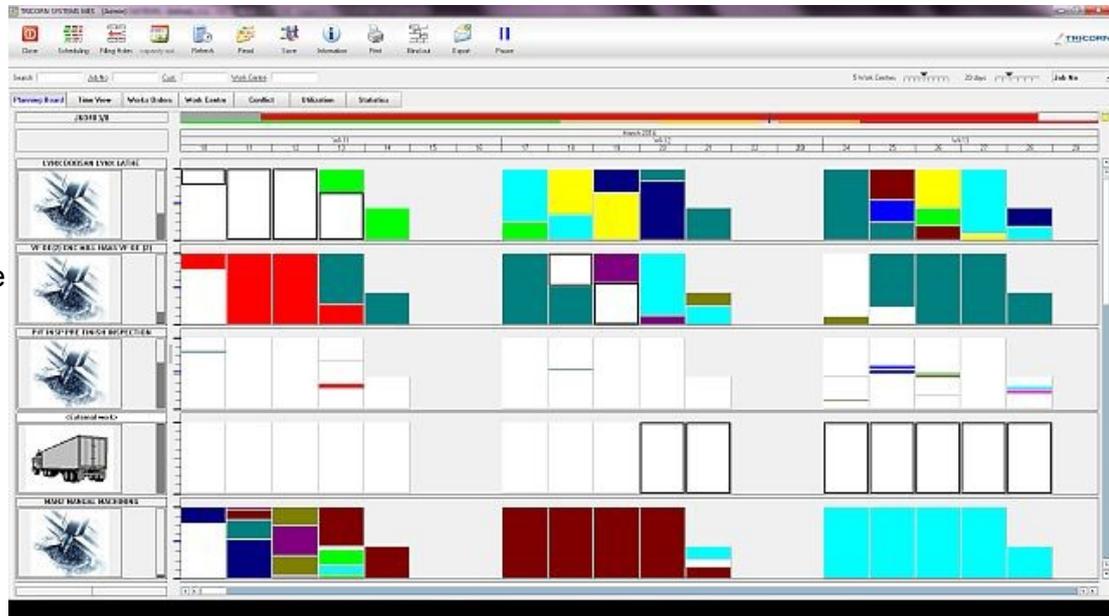

'Scheduler' software is a workshop planning tool designed to help engineering and manufacturing companies optimise their resources and plan production to achieve delivery efficiencies and cost targets.

It is seamlessly integrated into our Tricorn production system allowing us to update the plan instantly as production requirements change, and as manufacturing events are recorded. Having accurate, detailed, and live data ensures that our schedule reflects the true situation on the shop floor, allowing us to take appropriate action based on factual information.

Our Scheduler utilises live data throughout the system, providing information such as work in progress, the status of delivery schedules and hours spent on each job. This is collated using data gathered from around the factory through bar code readers & terminals.

Scheduler makes it easy for us to optimise our processes, control cost & improve our performance as a supplier.

It will allow us to keep on growing, whilst at the same time maintaining our unrivalled quality and continuing to enhance the value that it adds to our customers' processes.

Tricorn Systems Ltd. is based in Farnham, Surrey. It has extensive experience in dealing with UK-based manufacturing companies with more than 200 customers operating the Tricorn Production Control Software on a daily basis.
