Manual Turning

500 mm Dia X Z500. mm

Surface Grinding

X500. Y180. Z180. mm

Abrasive Cutting

X150. Y100. Z35. mm

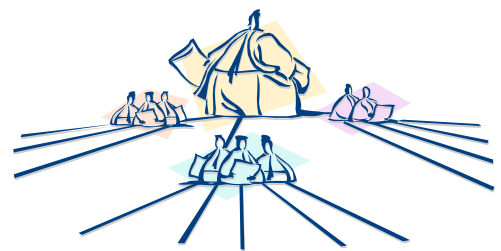

Under New Management

In November 2007 after 25 years at the helm Chris Sheppard retired from ADCUTECH Ltd.

The new Owner/Directors Stuart Climance & Georgina Colman took over the running of the business effective immediately.

Stuart has worked at ADCUTECH since 2002 and was the General Manager. Georgina, Chris's Daughter, joined in April 2007 to allow a complete handover prior to Chris's departure.

ADCUTECH will continue to provide the same high quality products and service on which it has built its reputation.

ISO9001:2000

CERTIFICATE NO. 27487

With all procedures documented and all quality aspects recorded ADCUTECH under went a formal external audit by URS (An UKAS registered body) in April 2008. Thanks to all the hard work & commitment from management and staff ADCUTECH were awarded their ISO9001:2000 certification on 28 April 2008.

ADCUTECH management and staff are committed to providing a quality service and components and will continue to improve the management system to sustain the ISO Certification.

During 2007/2008 ADCUTECH has been working hard on fulfilling the requirements that the ISO9001:2000 certification processes dictates.

Plans

Following on from the successful ISO9001 certification in the first half of the year ADCUTECH will work on developing its customer base and maximising the potential of the skilled employees. There will be no radical changes planned for 2008 as the 'new' management settle in and find their feet. Certainly any changes should appear seamless to existing customers.

Experienced staff will be key in helping

ADCUTECH achieve its goals. June saw the start of new recruit Steve Elliot who joined as a CNC Turner. Steve has many years experience in both turning and milling and is a welcome addition to the team.

ADCUTECH are also supporting the Young Apprentice Engineering scheme being run with local schools and Swindon college encouraging school leavers into Engineering.
